

Western Investing for Health, Derry -Case Study

www.westernifh.org

Western Investing for Health (WIFH) required a website to be used as a marketing and communication tool to inform and update the public of the work being undertaken by the organisation and the achievement of the Investing for Health (IFH) aims and objectives.

Functionality

Icon eBusiness developed a Content Managed Web Portal to provide WIFH a means of disseminating information to the public

Core functionality includes:

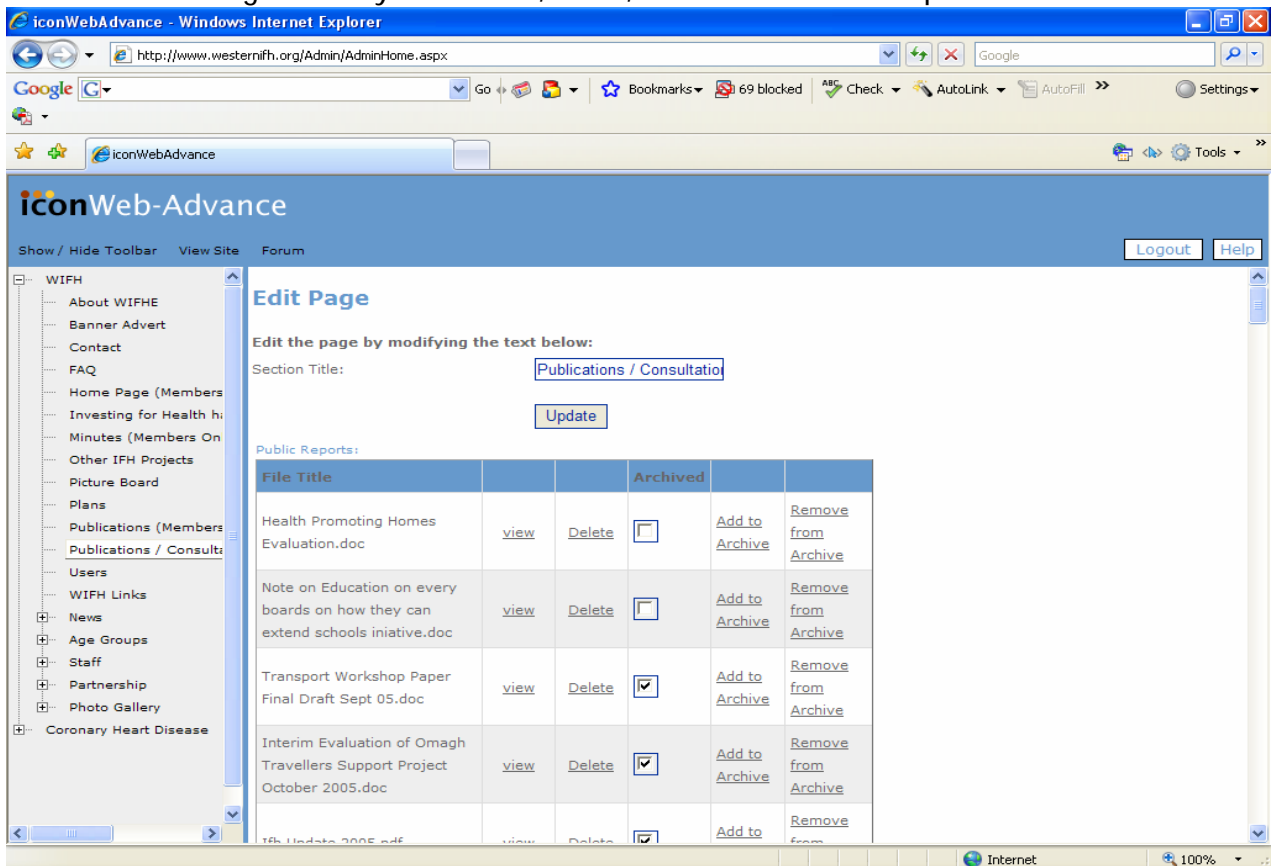

- The site is driven by iconWebAdvance allowing WIFH to populate each section with text, images, files for downloads etc.
- The design of the website reflects the change to the 10year strategy and the groups' constituent themes as outlined in the requirements.
- A members' area includes downloadable reports, evaluation questionnaires and discussion boards.
- A searchable database is provided for the entire range of services Website statistics are provided on a monthly basis to allow WIFH staff to monitor activity on the website.
- Full consultation from our graphic designers ensured delivery of a visually appealing, accessible user interface that with ease of use for the maximum number of users.
- Site administrators can upload images to a dynamic flash gallery, categorizing them by date. There is also an option to add several sub – galleries within each gallery.
- Document management functionality includes news items and publications which can be archived and categorized by date and project type.
- On site training was completed with a core group of staff on client premises.

WIFH Homepage

WIFH Content Management System- Add, view, delete and archive publications/consultations.

Technologies:

The WIFH portal was developed on Microsoft's ASP.NET 1.0 platform and programmed in C#. SQL Server 2000 is used for the database layer.

The system is hosted on two Windows Server 2003 dedicated enterprise servers in the Telehouse data centre in London.
